WELLCOME
HISTORICAL
MEDICAL
LIBRARY

INTRODUCTION.

The publication of the Index to the Library Catalogue has been undertaken by the Council, in the belief that it will add very materially to the usefulness of the Library, by collecting together the names of authors who have written on the various subjects indicated, and whose works are in the possession of the Society. Its compilation has been the work of the Sub-Librarian, Mr. Wheatley, who has devoted to it the greater part of his leisure time during three years. When completed, it was presented by him to the Council, who gratefully accepted the gift as a fresh instance of his zeal for the welfare of the Society, and appointed a Committee to superintend its publication, by whom the MS. was thoroughly revised, and each sheet subjected to the most careful scrutiny whilst passing through the press. They trust, therefore, that the errors almost unavoidable in the first edition of a work of this kind will be found as few as possible, and they would offer the following explanations, which may aid in making the plan on which it has been constructed intelligible.

1. In the arrangement of the names of authors, Academical Dissertations and Theses are separated by an asterisk

from the other works on the same subject, according to the plan already adopted in the Library Catalogue.

2. Under the subheading of "plates," reference is made not only to "atlases," but also to any works of which the plates form a very important feature.

3. The Index refers to authors of papers in Journals and Transactions only when those papers have been issued separately, and copies have been presented to, or purchased by, the Society. This has given rise to the insertion of some names as writers on subjects who have not published substantive treatises on them, whilst others, having equal claim to notice in a bibliographical point of view, have necessarily been omitted because their names do not appear in the Catalogue.

4. All systematic works are entered under the general headings of Medicine, Surgery, &c., and the names do not recur under any of those subjects which are necessarily included in them as subdivisions; but reference is made under these subdivisions to collected works of authors in which special subjects are enumerated on the titlepage [*e.g.* "Bright (Richard) Reports," &c. (Lib. Cat., p. 97, anno 1856), are referred to under "Anasarca," "Ascites," &c.]

5. In cases of works with indefinite titles, such as 'Essays on Medical and Surgical Subjects,' &c., the books themselves have been consulted, and the special subjects of which they treat included in the Index, with an addition to the author's name of some portion of the title sufficient to indicate the character of the work [*e.g.* under "Bleeding" (Index, p. 29), "Paine (Commentaries)"].

6. Names of authors on general classes of disease [*e.g.*

Diseases of the Urinary Organs] have not been repeated under the subdivisions [*e.g.* Bladder, Urethra, &c.], except when those words occur on the titlepages of the books themselves.

7. Works on general and special subjects are connected by cross-references, which have been made as numerous as possible. Cross-references will also be found from the various epithets employed in the titles of books in the Library to some synonymous term under which all such works have been classed [*e.g.* "Measles, see Rubeola;" "Morbilli, see Rubeola," &c.]

8. Among the names of authors will be found any subject-headings which occur in the Library Catalogue. These have been generally marked by inverted commas [*e.g.* under FORMULÆ (Index, p. 106), 'Pharmacopœia,' 'Prescriptions' (Lib. Cat., anno 1856, pp. 496—501; and p. 519) *q. v.*]
